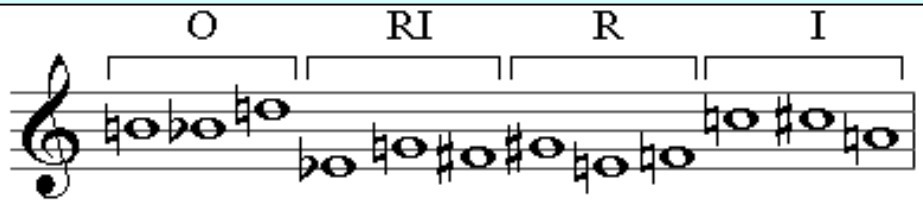
Simmetrie musicali e strutture matematiche

Ernst Krenek e l'approccio assiomatico in musica

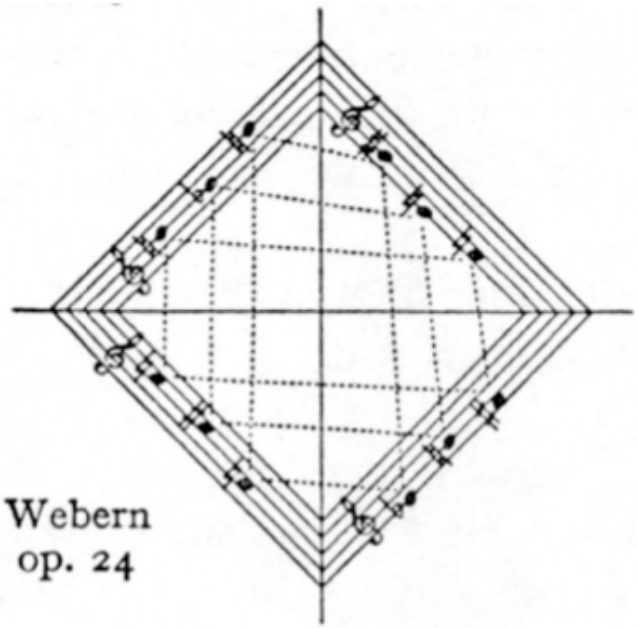
- *The Relativity of Scientific Systems*
- *The Significance of Axioms*
- *Axioms in music*
- *Musical Theory and Musical Practice*

Ernst Krenek : *Über Neue Musik*, 1937 (Engl. Transl. *Music here and now,* 1939).

Physicists and mathematicians are far in advance of musicians in realizing that their respective sciences do not serve to establish a concept of the universe conforming to an objectively existent nature



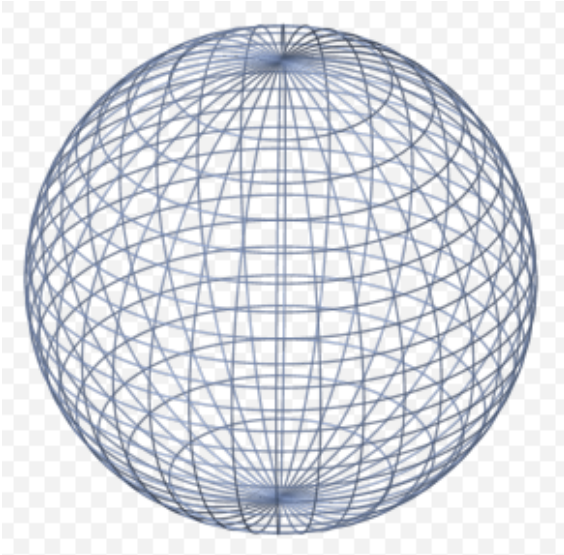
As the study of axioms eliminates the idea that axioms are something absolute, conceiving them instead as ***free propositions of the human mind****, just so would this* ***musical theory*** *free us from the concept of major/minor tonality [...] as an irrevocable law of nature.*



L'approccio assiomatico in matematica

David Hilbert: i fondamenti assiomatici della geometria e il ruolo dell'intuizione

In order to be constructed in a right way, geometry [...] only needs few simple principles. These principles are called the ***axioms*** *of the geometry. [...] This study (of the axioms) goes back to the* ***logical analysis of our spatial intuition***
(Grundlage der Geometrie, 1899).



At the moment there are two tendencies in mathematics. From one side, the tendency toward abstraction aims at 'cristallizing' the logical relations inside of a study object and at organizing this material in a systematic way. But there is also a tendency towards the ***intuitive understanding*** *which aims at understanding the* ***concret meaning of their relations***
(Anschauliche Geometrie, 1932)

Rappresentazioni geometriche delle strutture musicali

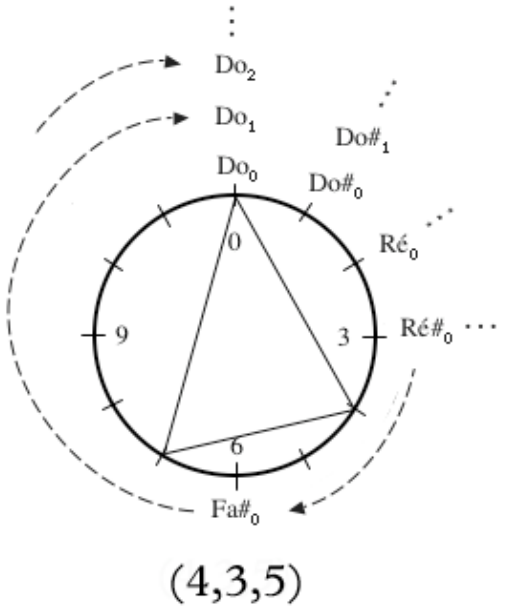
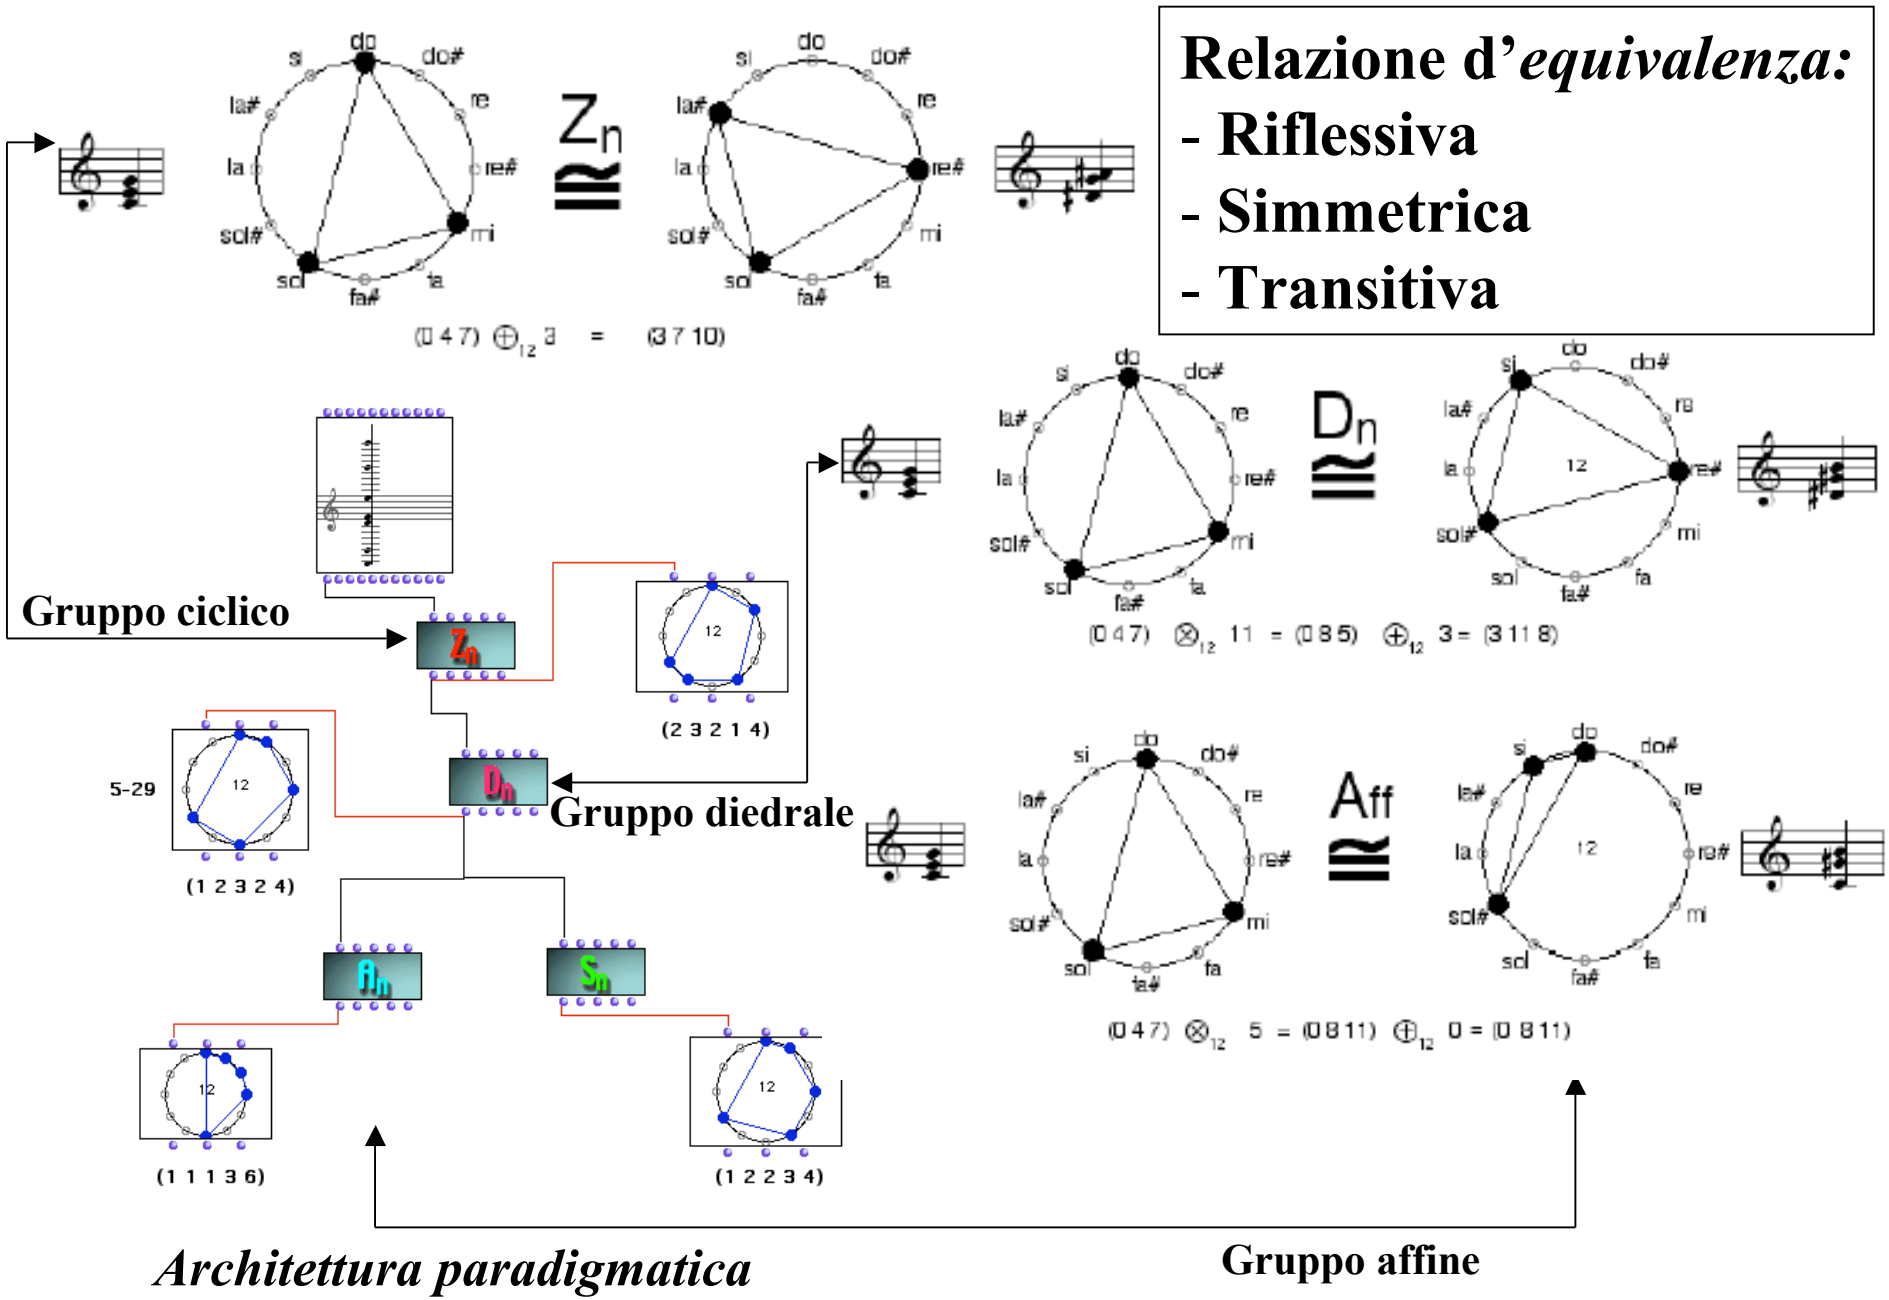
$$Z_{12} = Z_3 \times Z_4$$



Rappresentazione circolare

I gruppi come “paradigmi” per l’equivalenza fra accordi



Architettura paradigmatica e strutture algebriche in musica

« [C'est la notion de groupe qui] donne un sens précis à l'idée de structure d'un ensemble [et] permet de déterminer les éléments efficaces des transformations en réduisant en quelque sorte à son schéma opératoire le domaine envisagé. [...]L'objet véritable de la science est le ***système des relations*** *et non pas les termes supposés qu'il relie. [...] Intégrer les résultats - symbolisés - d'une* ***expérience*** *nouvelle revient [...] à créer un canevas nouveau, un* ***groupe de transformations*** *plus complexe et plus compréhensif »*

G.-G. Granger : « Pygmalion. Réflexions sur la pensée formelle », 1947

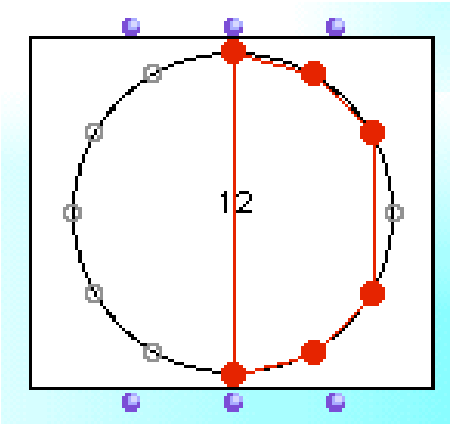
Contenuto intervallare e trasformata di Fourier discreta

David Lewin, *Journal of Music Theory,* 1958

- Il **contenuto intervallare** (*IC*) di un accordo esprime la frequenza di apparizione di ogni intervallo (dall'unisono all'intervallo di settima maggiore)



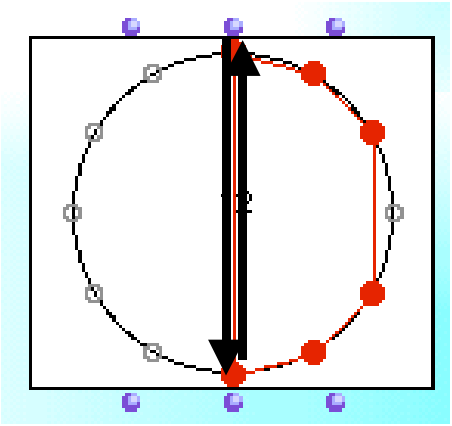
$IV_A =$ [4, 3, 2, 3, 2, 1]

$IC_A =$ [6, 4, 3, 2, 3, 2, 2, 2, 3, 2, 3, 4]

Contenuto intervallare e trasformata di Fourier discreta

David Lewin, *Journal of Music Theory*, 1958

- Il **contenuto intervallare** (*IC*) di un accordo esprime la frequenza di apparizione di ogni intervallo (dall'unisono all'intervallo di settima maggiore)



$IV_A =$ [4, 3, 2, 3, 2, 1]

$IC_A =$ [6, 4, 3, 2, 3, 2, 2, 2, 3, 2, 3, 4]

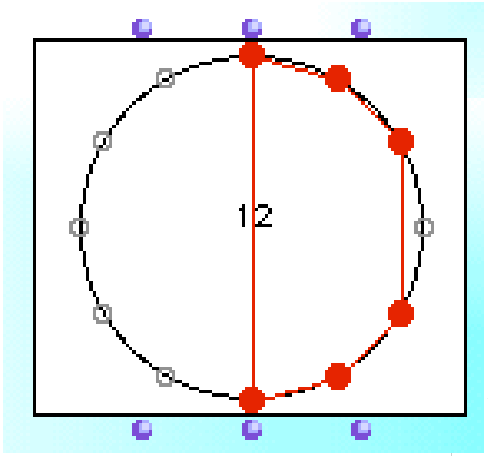
$$IC_A(k) = \mathrm{Card}\{(x, y) \in A \times A \mid x + k = y\}$$

$$IC_A(k) = (1_A \star 1_{-A})(k)$$

$$1_A * \tilde{1}_B(k) = \sum_i 1_A(i) \times 1_B(i-k) = \sum_{\substack{i \in A \\ i-k \in B}} 1$$

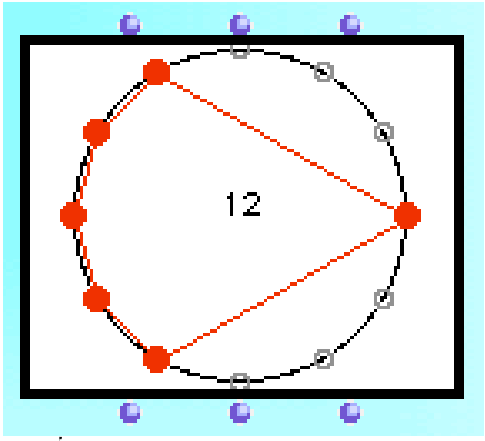
Teorema di Babbitt e trasformata di Fourier discreta

Emmanuel Amiot, *Quadrature*, 2006



A

Un esacordo e il suo complementare hanno lo stesso contenuto intervallare



A'

$$\text{fourier}(\text{set}, \text{t}) := \sum_{k \in set} e^{2i\pi kt/12}$$

$$IC_A(k) = (1_A \star 1_{-A})(k)$$

$$\mathcal{F}(1_A * \tilde{1}_B) = \mathcal{F}(1_A) \times \mathcal{F}(\tilde{1}_B)$$

$$\forall k \; \mathcal{F}(\mathrm{IC}_{\mathbb{Z}_c \setminus A})(k) = \mathcal{F}(\mathrm{IC}_A)(k)$$

$$\Rightarrow \quad IC_{A'} = IC_A$$

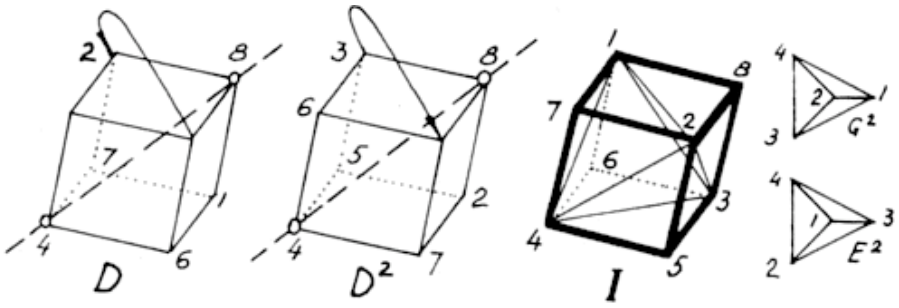
Analisi musicale computazionale: *Nomos Alpha* di I. Xenakis

La questione delle simmetrie (identità spaziali) e delle periodicità (identità nel tempo) ha un ruolo fondamentale nella musica, a tutti i livelli, da quello dei campioni sonori della sintesi del suono mediante computer, fino all'architettura di un intero brano musicale



***Nomos Alpha* (1966)**

Musique symbolique pour violoncelle seul, possède une architecture "hors-temps" fondée sur la théorie des groupes de transformations.

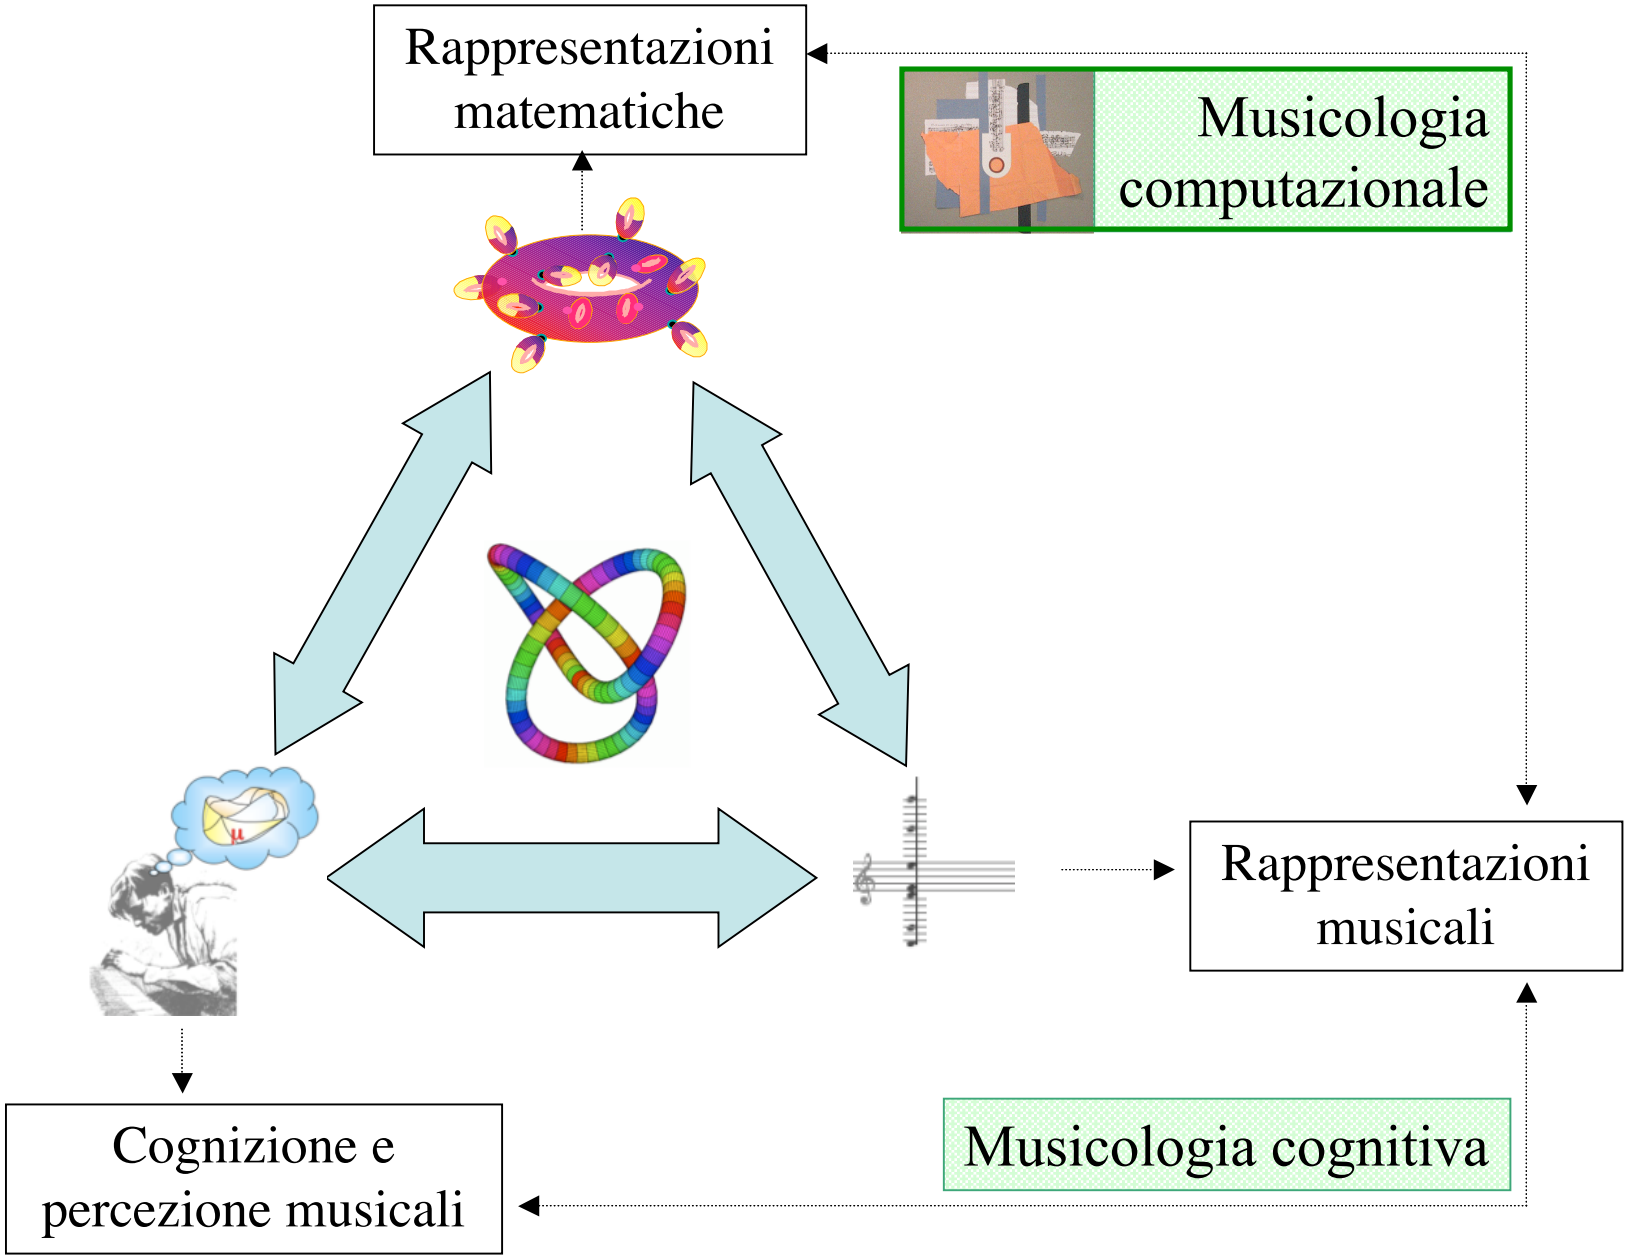
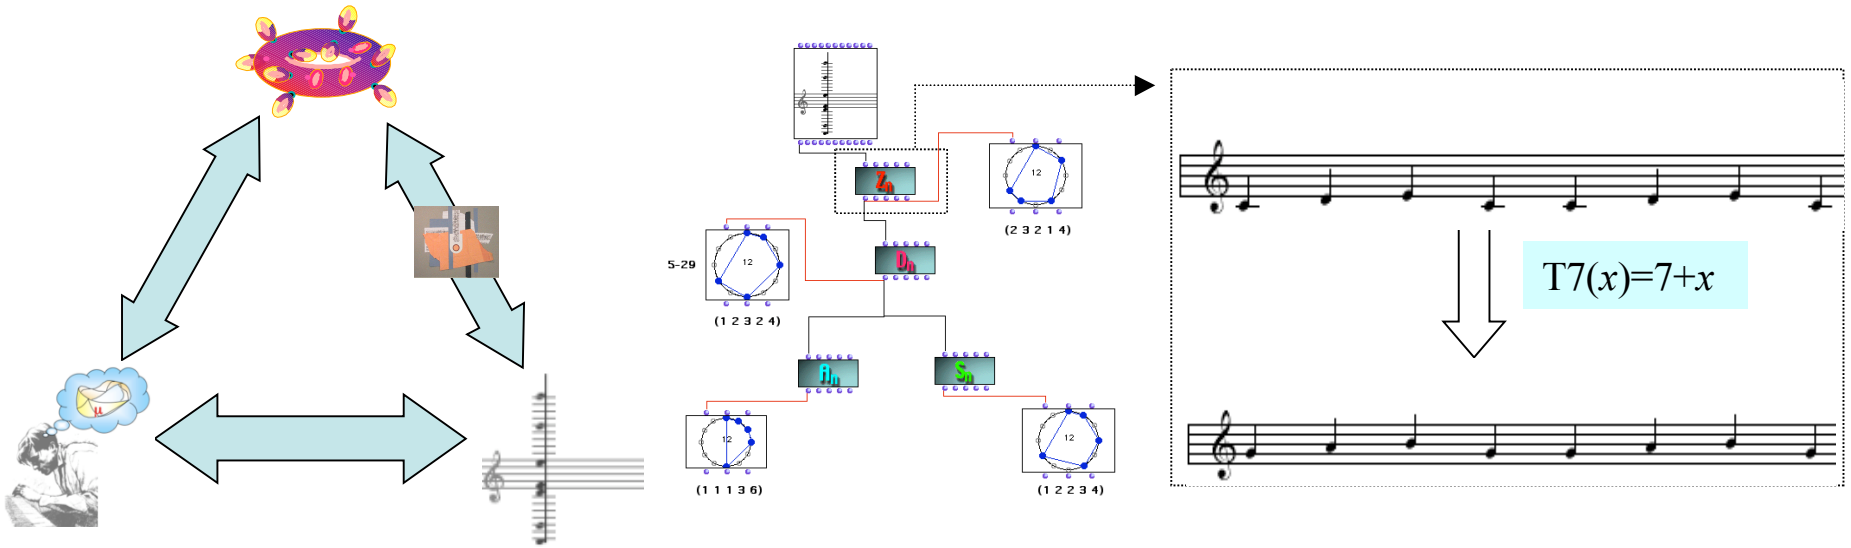
Matematica/Musica & Cognizione/Percezione



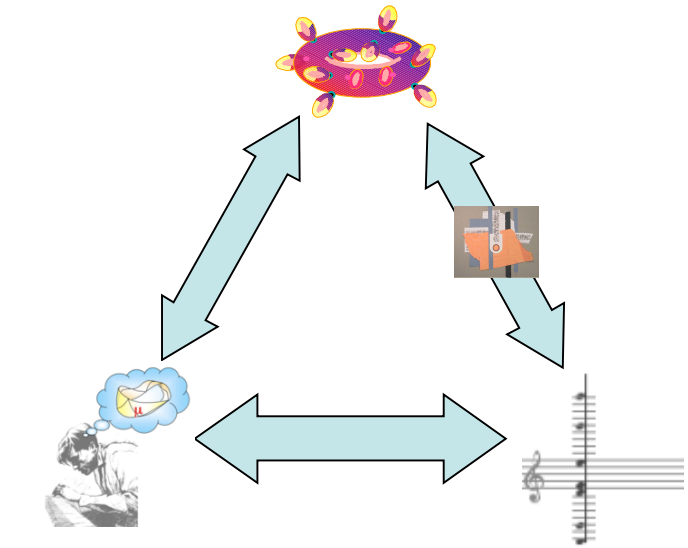
Ramificazioni percettive e cognitive dei metodi algebrici in musica

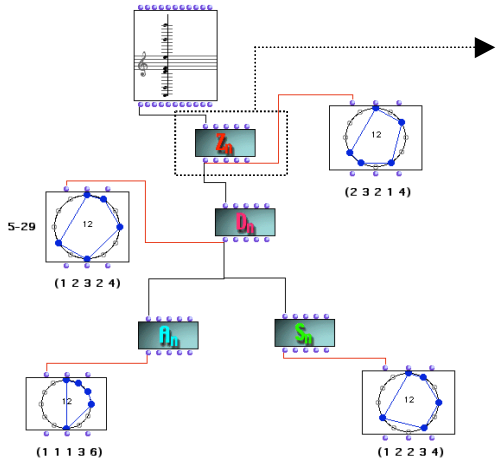


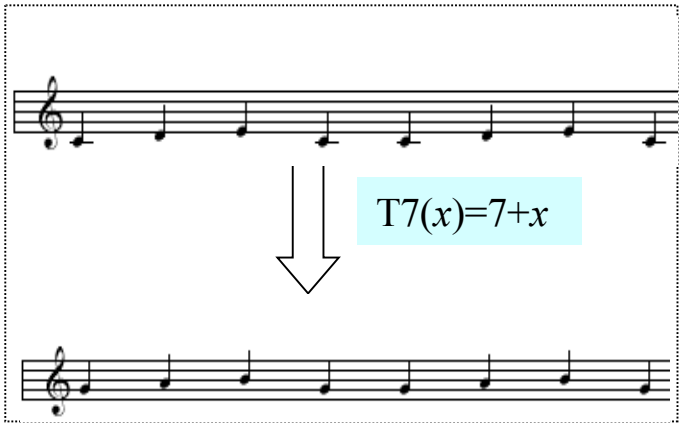
The nature of a given geometry is […] defined by the *reference* to a determinate **group** and the way in which spatial forms are related within that type of geometry. [*Cf. Felix Klein Erlangen Program - 1872*][…] We may raise the question whether there are any concepts and principles that are, although in different ways and different degrees of distinctness, necessary conditions for both the *constitution* of the **perceptual world** and the construction of the universe of geometrical thought. It seems to me that the concept of **group** and the concept of **invariance** are such principles.

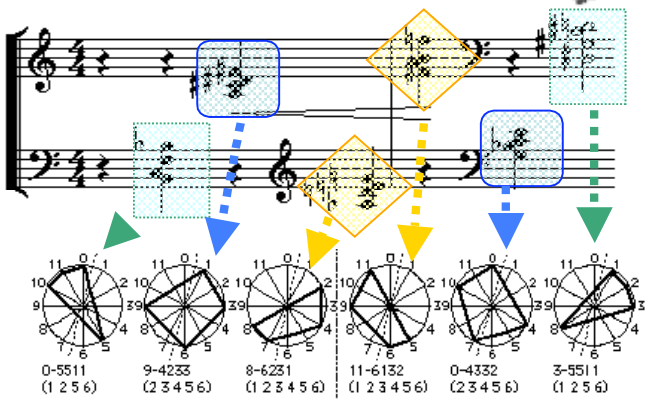
E. Cassirer, "The concept of group and the theory of perception", 1944

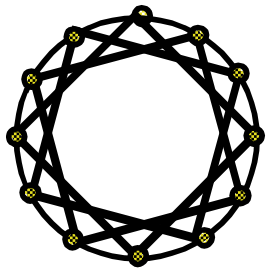
Ramificazioni percettive e cognitive dei metodi algebrici in musica

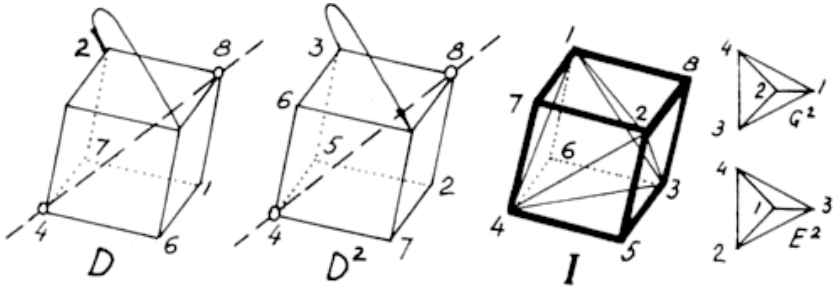












Il carattere singolare dell'esperienza musicale è dovuto in parte alle strutture particolari di ***gruppo*** *che la musica rende accessibile* [consciamente o inconsciamente] *all'ascoltatore.*

G. Balzano : « The group-theoretic description of 12-fold and microtonal pitch systems », 1980
