# Programma del corso

---

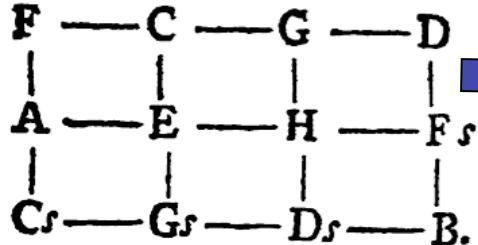

- 1.) Rappresentazione e formalizzazione delle strutture musicali
- 2.) Enumerazione e classificazione delle strutture musicali
- 3.) Teorie trasformazionali, diatoniche e neo-riemanniane
- 4.) Tessellazioni musicali: la costruzione dei canoni ritmici a mosaico
- 5.) Sequenze periodiche e calcolo delle differenze finite a valori in gruppi ciclici
- 6.) Ramificazioni filosofiche e cognitive dell'approccio algebrico in musica

# Rappresentazione e formalizzazione delle strutture musicali

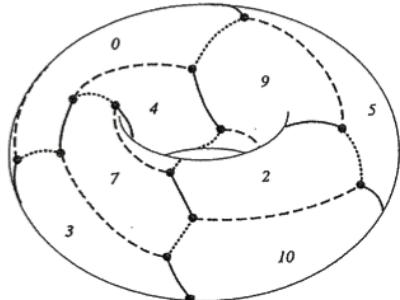

---

- Rappresentazioni geometriche e formalizzazioni algebriche
  - Il *Tonnetz* di Eulero
  - Rappresentazioni circolari e toroidali
  - Teoria degli *orbifolds*
  - Cenni dell'approccio categoriale
- Strumenti informatici e rappresentazioni simboliche
  - Teoria della calcolabilità
  - Teoria della complessità
  - Calcolo informatico
  - Lambda-calcolo
  - Programmazione logica e calcolo concorrente
  - Analisi musicale assistita su calcolatore

# I gruppi come “paradigmi” per l’equivalenza fra accordi

# Architettura paradigmatica e strutture algebriche in musica

« [C'est la notion de groupe qui] donne un sens précis à l'idée de structure d'un ensemble [et] permet de déterminer les éléments efficaces des transformations en réduisant en quelque sorte à son schéma opératoire le domaine envisagé. [...] L'objet véritable de la science est le **système des relations** et non pas les termes supposés qu'il relie. [...] Intégrer les résultats - symbolisés - d'une **expérience** nouvelle revient [...] à créer un canevas nouveau, un **groupe de transformations** plus complexe et plus compréhensif »

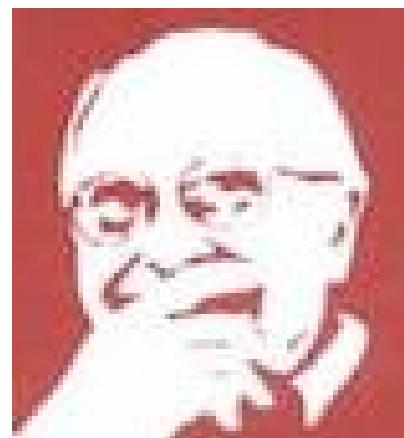

G.-G. Granger : « Pygmalion. Réflexions sur la pensée formelle », 1947

**Set Theory**

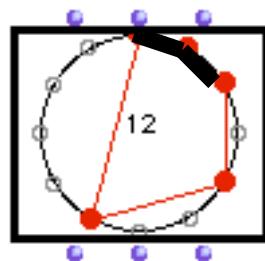

# La Set Theory d'Allen Forte: catalogo dei *pitch-class sets*

complementare		
name	pcs	vector
5-Z36	0,1,2,4,7	222121
7-Z36	0,1,2,3,5,6,8	444342

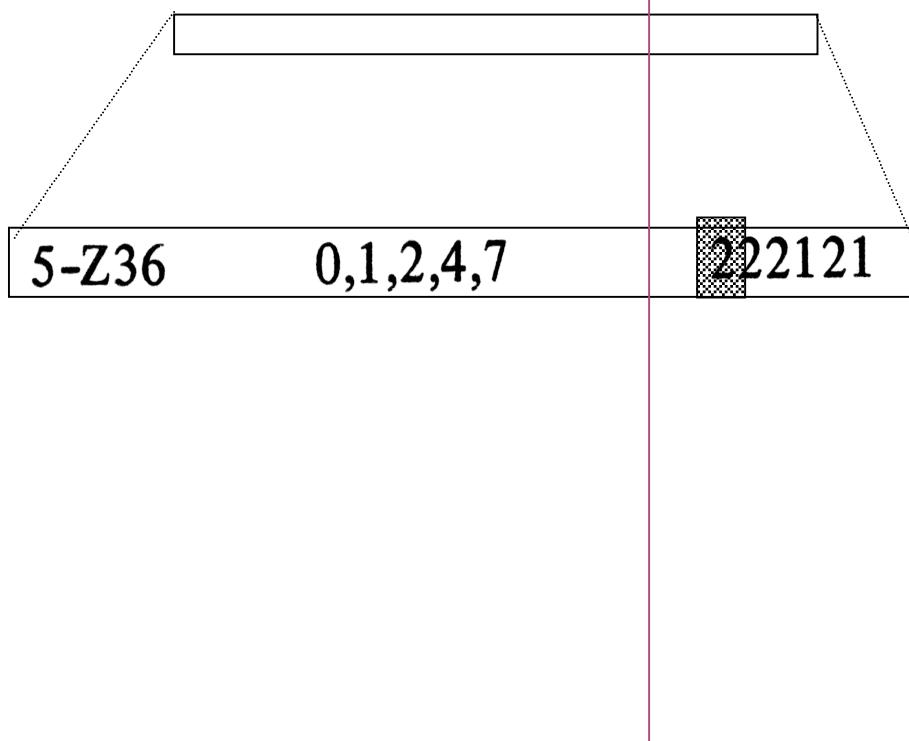

Relazione Z

The diagram illustrates the relationship between two pitch-class sets, 5-Z36 and 7-Z36, under the relation Z. The sets are represented as rows in a table. The first row contains the name "5-Z36", the pcs "0,1,2,4,7", and the vector "222121". The second row contains the name "7-Z36", the pcs "0,1,2,3,5,6,8", and the vector "444342". A red horizontal bar connects the vector of 5-Z36 to the vector of 7-Z36. A blue horizontal bar connects the vector of 7-Z36 back to the vector of 5-Z36. Arrows point from the labels "5-Z36" and "7-Z36" to their respective vectors.

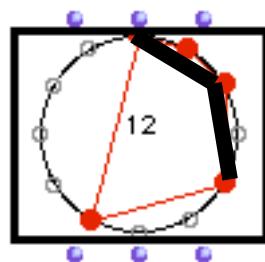

# Vettore intervallare e relazione Z

Il vettore intervallare (Forte) esprime la frequenza di apparizione di ogni intervallo (modulo il suo complementare)

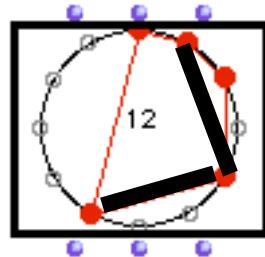

# Vettore intervallare e relazione Z

Modèle  
rythmique

« ...il résulte de tout cela que les différentes sonorités se mélangent ou s'opposent de manières très diverses, jamais au même moment ni au même endroit [...]. C'est du désordre organisé »

O. Messiaen : *Traité de Rythme, de Couleur et d'Ornithologie*, tome 2, Alphonse Leduc, Paris, 1992

# Canoni a mosaico a simmetria trasposizionale

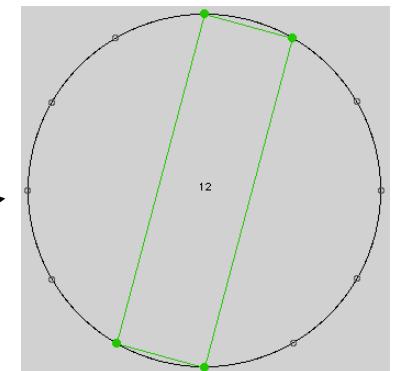

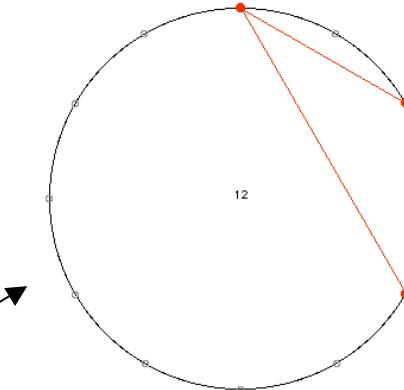

$$\mathbf{Z}_{12} = \mathbf{A} \oplus \mathbf{B}$$

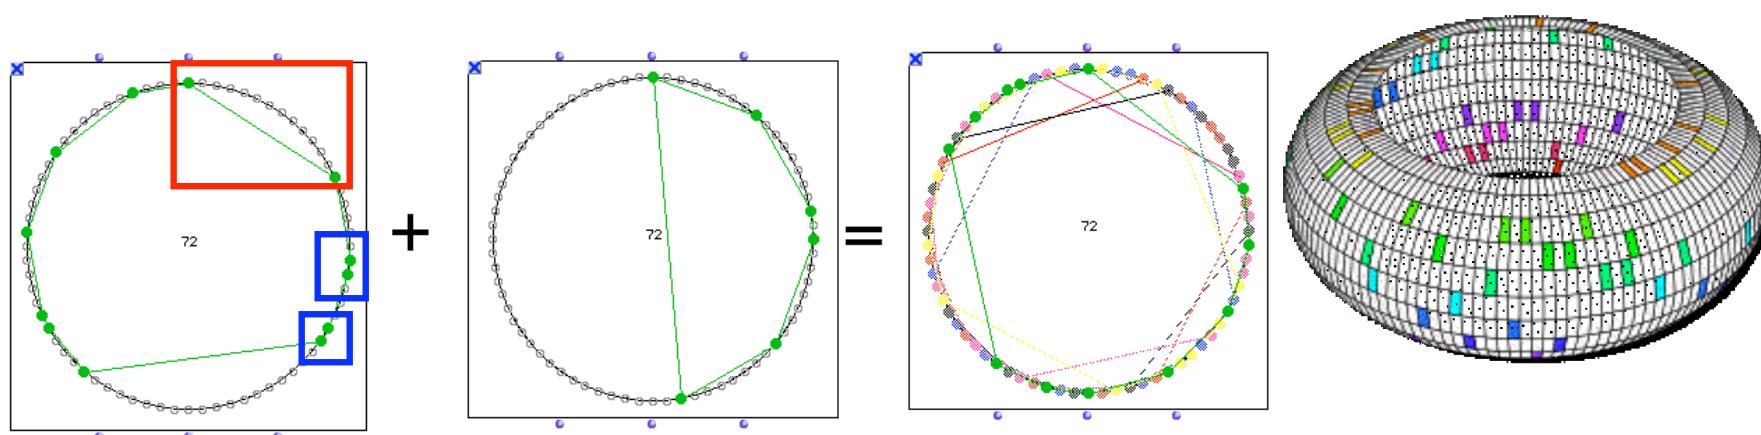

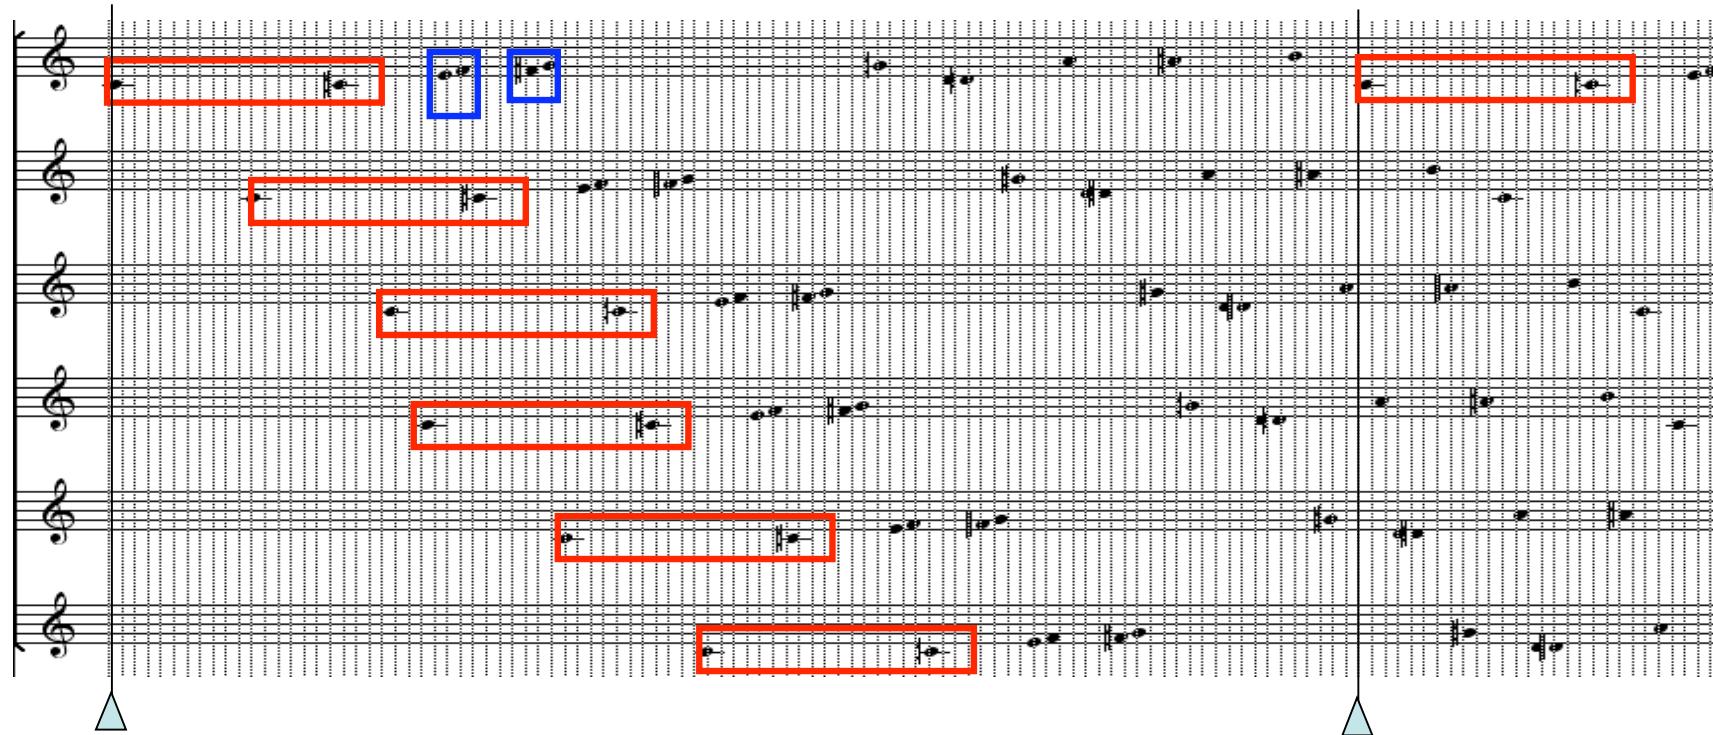

{

$$\mathbf{A} = \{0, 2, 4\}$$

$$\mathbf{B} = \{0, 1, 6, 7\}$$

# *Vuza Canons* : canoni a mosaico senza periodicità interne

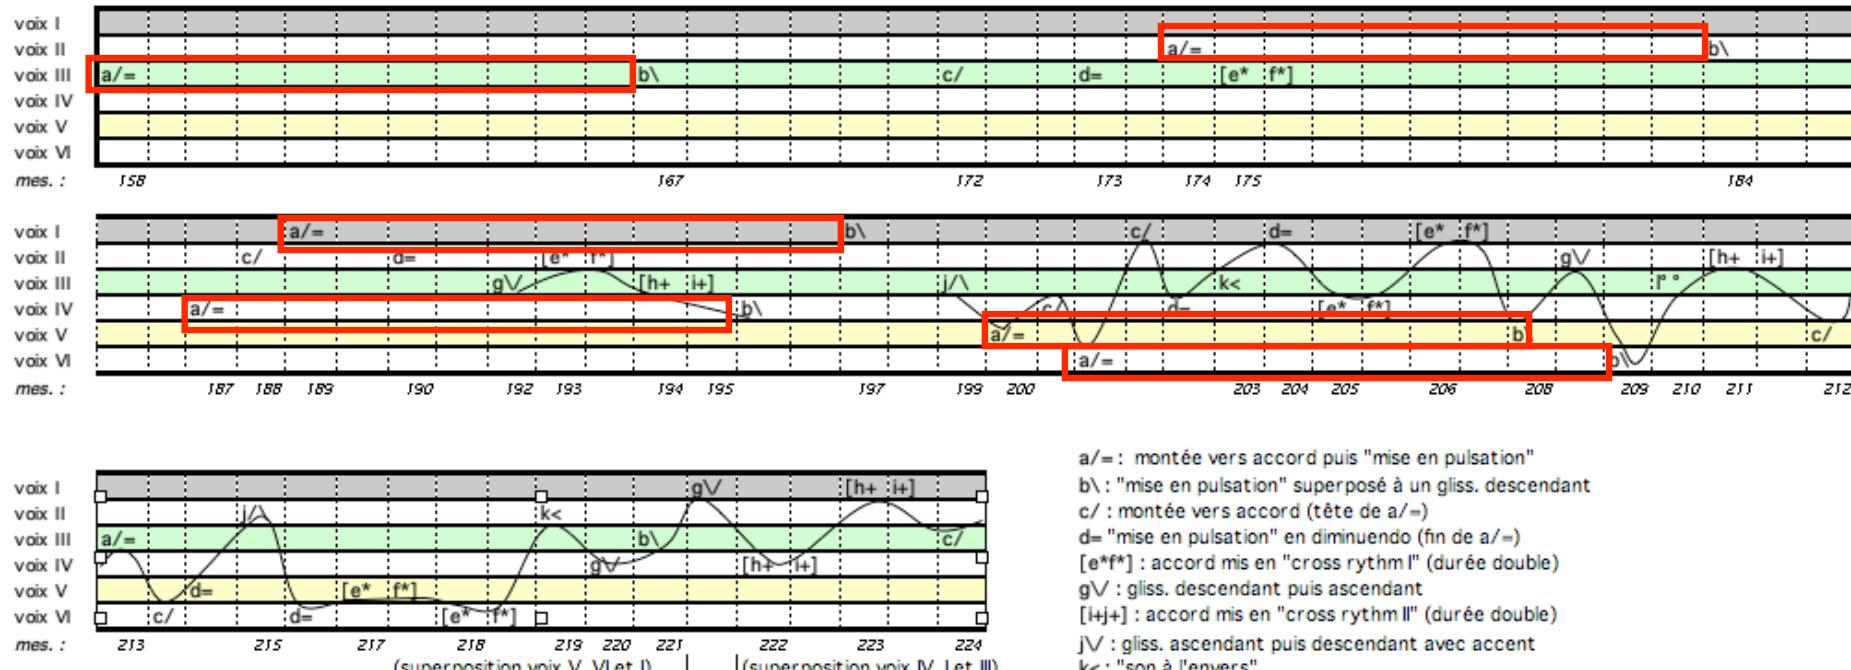

# Fabien Lévy

## Canoni di Vuza su gesti strumentali complessi

- *Coïncidences* (pour 33 musiciens, 1999-2007)

Coïncidences - Fabien Levy : déroulement du canon (mes. 158 à 226)  
(chaque impact fait 3 temps)

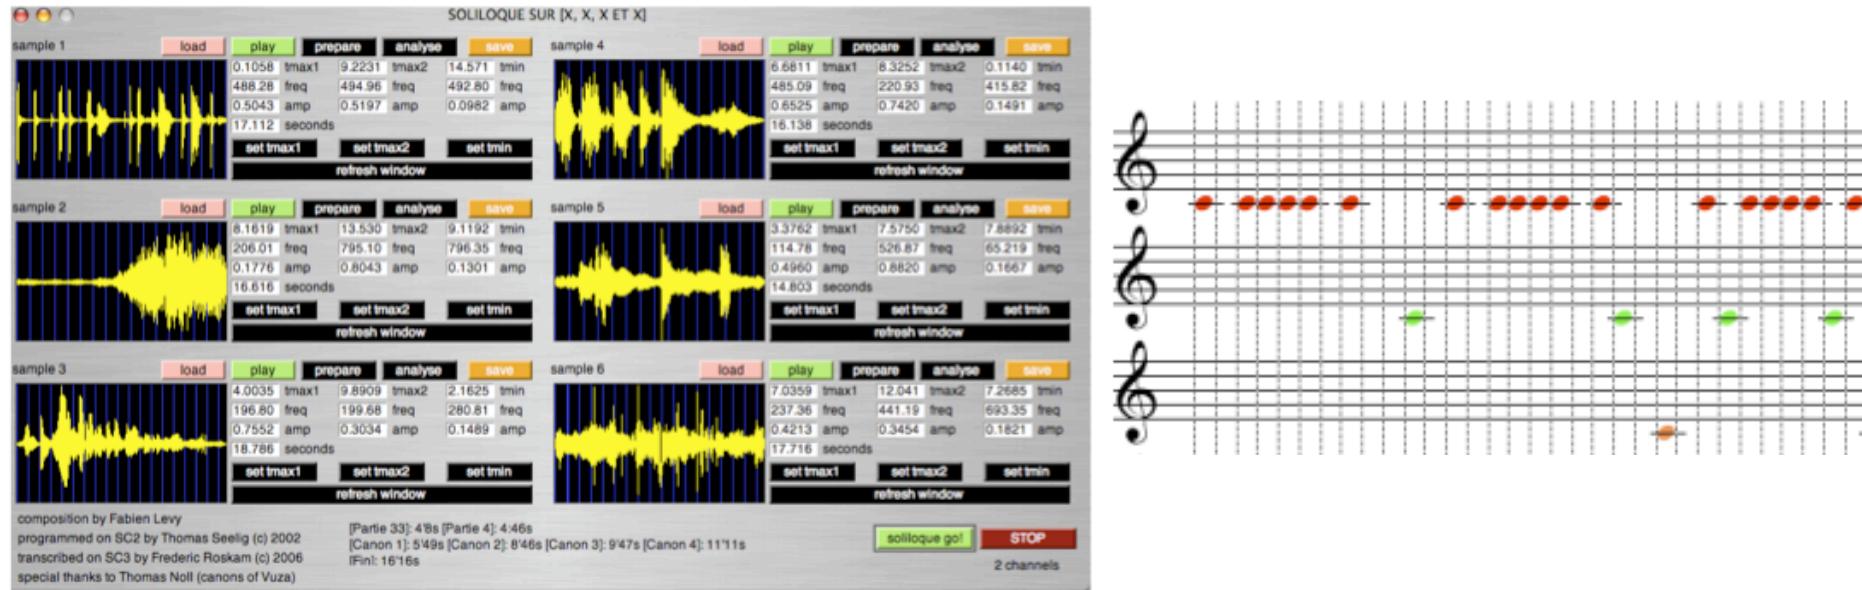

Interprètes : Tokyo Symphony Orchestra, Dir.: Kazuyoshi Akiyama, 05/09/2007, Suntory Hall, Tokyo, Japon

# Fabien Lévy

## Canoni « aumentati » e CAO

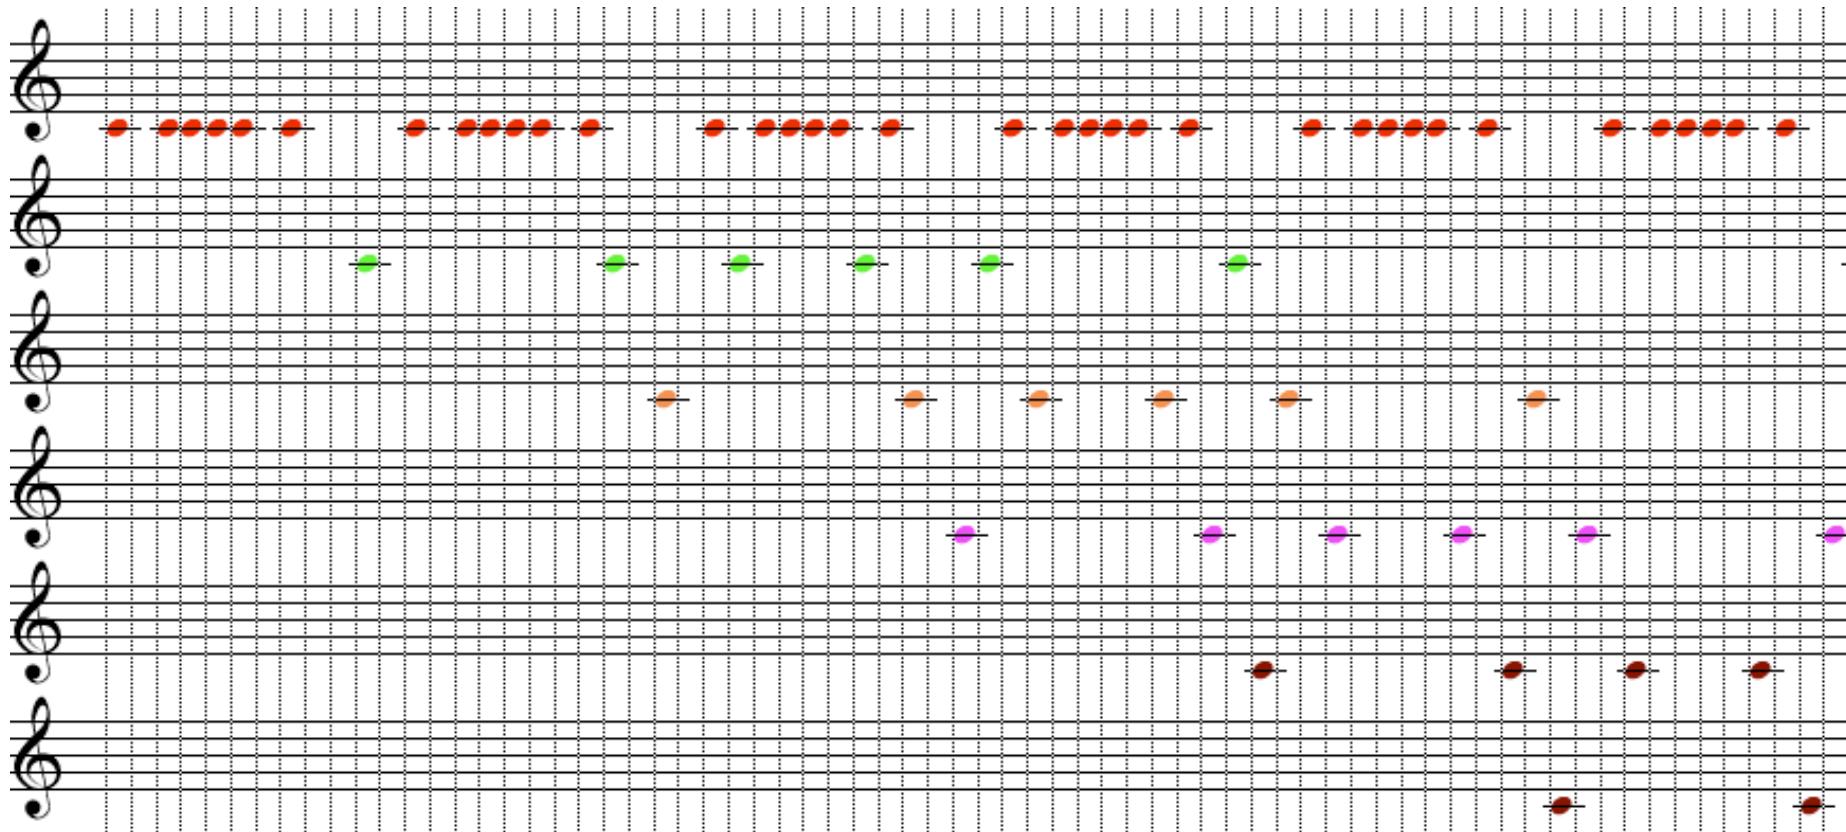

- *Soliloque sur [X, X, et X], commentaire par un ordinateur d'un concert mal compris de lui*

(in collaborazione con Thomas Noll)

# *Augmented Tiling Canons o l'azione del gruppo affine*

(in collaborazione con Thomas Noll)

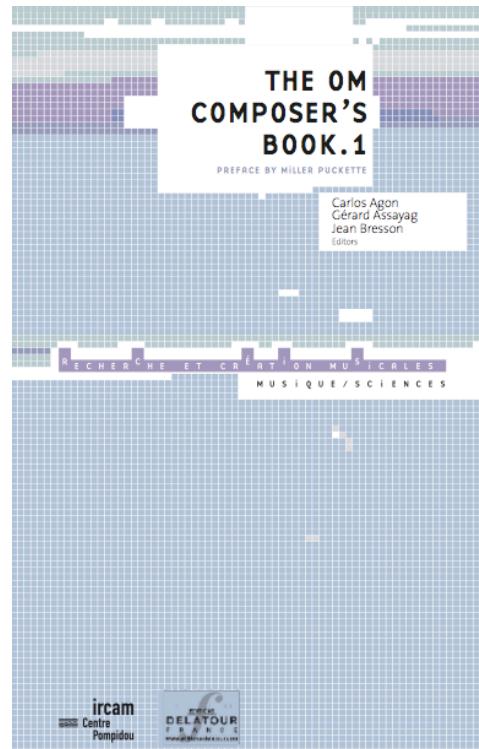

=> *OpenMusic*

# Georges Bloch

## Strategie compositive a partire da un modello formale

- Organisation métrique d'un canon mosaïque
- Réduction d'un canon par auto-similarité
- Modulation métrique entre canons
- Transformation d'un canon dans une texture
- Canons mosaïques et IAO (*OMax*)

- *Projet Beyeler* (2001)
- *Projet Hitchcock*
- *Visite des tours de la cathédrale de Reims*
- *Noël des Chasseurs*
- *Canons à marcher*
- *Canon à eau*
- *Harawun* (2004)
- *L'Homme du champ* (2005)
- *A piece based on Monk* (2007)
- *Peking Duck Soup* (2008)

A musical score for six voices (V1 to V6) on a staff system. The score consists of six staves, each with a different vocal line. The music is in common time (73). The voices are: V1, V2, V3, V4, V5, and V6. The score includes various musical markings such as dynamics (mp, pp, mf, f), tempo changes, and rests. The vocal parts are mostly in soprano range.

- *A piece based on Monk* (2007)  
('' Well You Need'n't '')

# Mauro Lanza

## Canoni di Vuza e periodicità locali

- *La descrizione del diluvio* (Ricordi, 2007-2008)

Canon à 14 voix sur le pattern rythmique :

(1 3 25 27 1 3 11 14 27 1 3 25 27 4 25 27 1 3 25 14 13 1 3 25 27 1 3 52)

No. 1 "Aria"

Elettronica

Local Dynamics :

General Dynamic:  $\text{ppppp} - \text{ff}$

poco a poco crescendo fino a misura 40 ( $\text{ppp} - \text{mf}$ )

Soprano

Mezzo

Alto

Tenor

Baritono

Basso

$\frac{4}{4}$

$\frac{4}{4}$

$\text{♩} = 80$

6 voix sont en live et 8 dans l'électronique. L'unité est la double-croche de triolet. Le choix des notes et des durées est fait en cherchant à souligner certaines quasi-périodicités du canon de Vuza, et cela donne à chaque voix un caractère beaucoup plus “redondant”.

## Sequenze periodiche e calcolo delle differenze finite

- Sequenze riducibili, riproducibili e teorema di fattorizzazione
- Applicazione alle grammatiche formali e alla teoria dell'imparità ritmica

# Sequenze periodiche e calcolo delle differenze finite

$$Df(x) = f(x) - f(x-1)$$

$$\begin{aligned} f &= 7 \underset{\backslash}{1} \underset{\backslash}{1} \underset{\backslash}{1} 0 \underset{\backslash}{1} \underset{\backslash}{1} 7 \underset{\backslash}{2} 7 \underset{\backslash}{1} 1 \underset{\backslash}{1} 0 \underset{\backslash}{1} \underset{\backslash}{1} 7 \underset{\backslash}{2} 7 \underset{\backslash}{1} 1 \dots \\ Df &= 4 \underset{\backslash}{1} \underset{\backslash}{1} 1 \underset{\backslash}{1} 8 \underset{\backslash}{7} 5 \underset{\backslash}{4} 1 \underset{\backslash}{1} 1 \underset{\backslash}{8} 7 \underset{\backslash}{5} 4 \underset{\backslash}{1} 1 \dots \\ D^2f &= 1 \underset{\backslash}{1} 7 \underset{\backslash}{2} 7 \underset{\backslash}{1} 1 0 \underset{\backslash}{1} 1 7 \underset{\backslash}{2} 7 \underset{\backslash}{1} 1 0 \dots \\ D^3f &= 1 \underset{\backslash}{8} 7 \underset{\backslash}{5} 4 \underset{\backslash}{1} 1 1 \underset{\backslash}{8} 7 \underset{\backslash}{5} 4 \underset{\backslash}{1} 1 \dots \\ D^k f &= \dots \end{aligned}$$

# Analisi musicale computazionale: *Nomos Alpha* di I. Xenakis

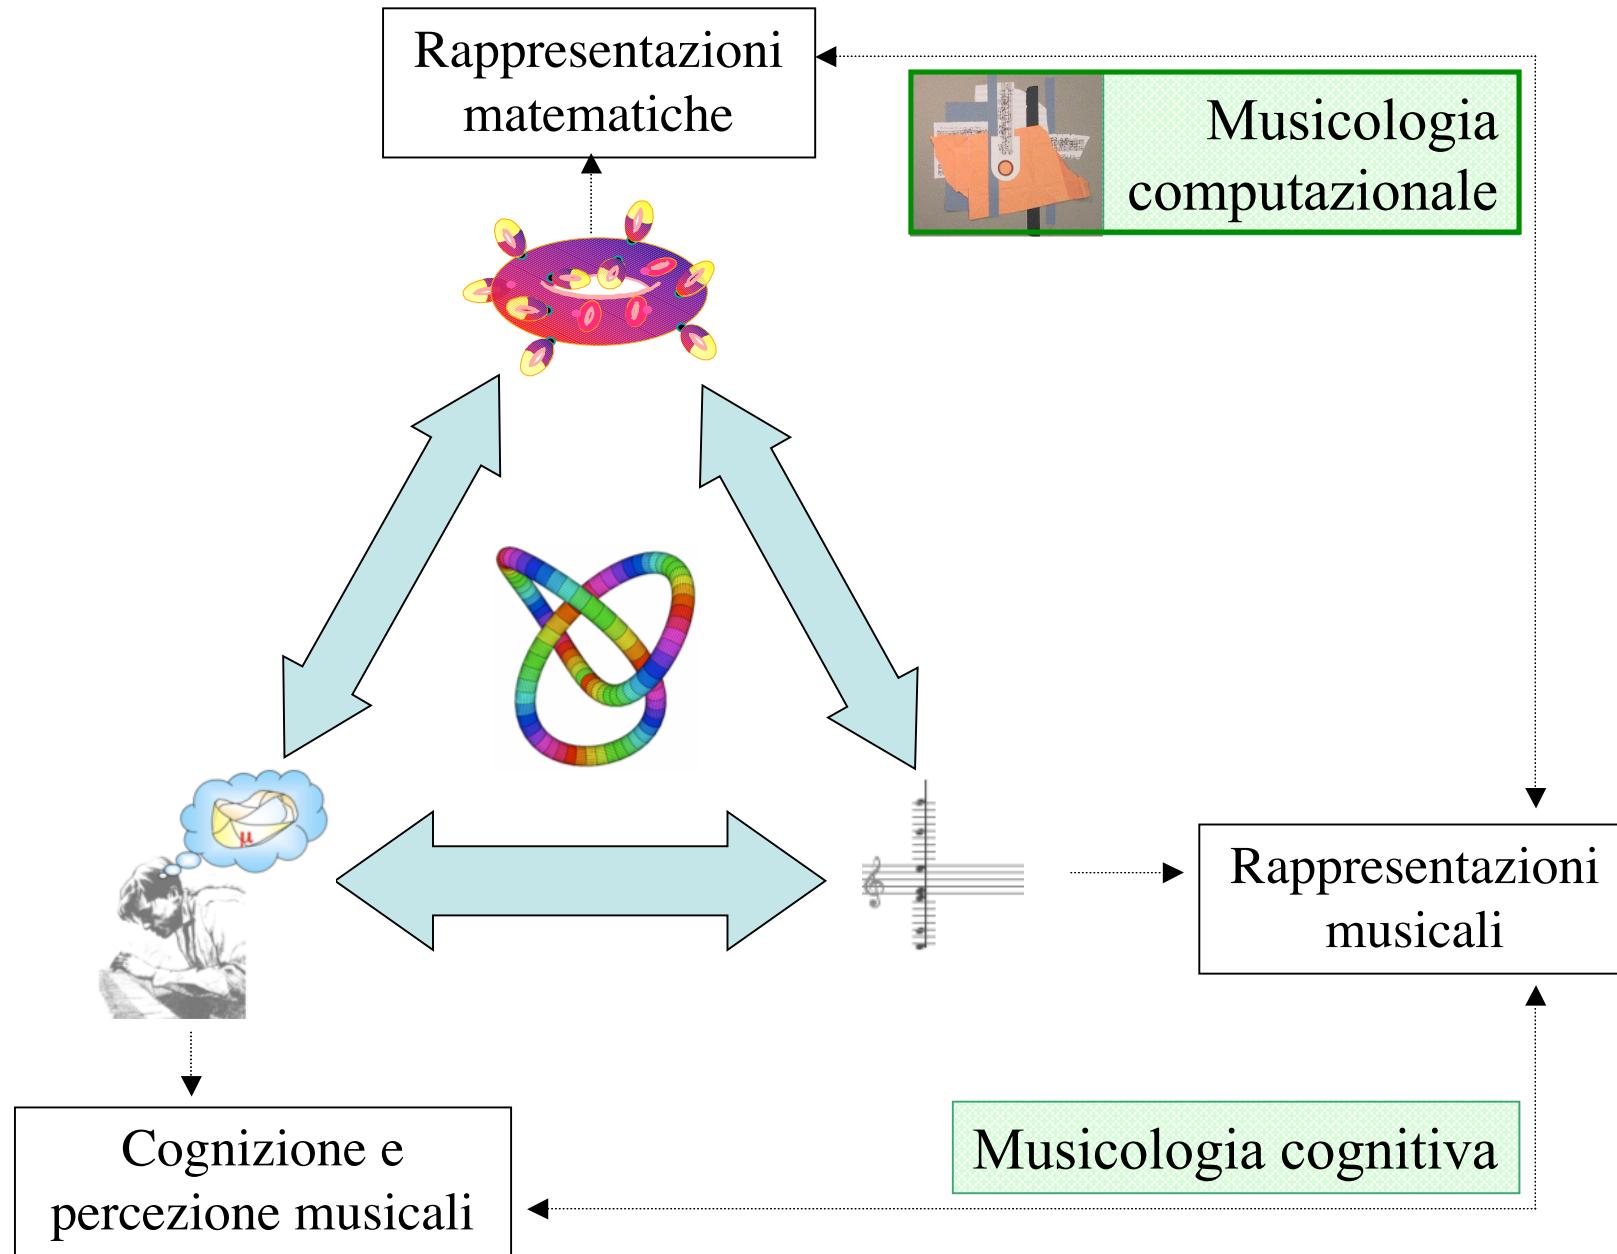

*La questione delle simmetrie (identità spaziali) e delle periodicità (identità nel tempo) ha un ruolo fondamentale nella musica, a tutti i livelli, da quello dei campioni sonori della sintesi del suono mediante computer, fino all'architettura di un intero brano musicale*

## *Nomos Alpha* (1966)

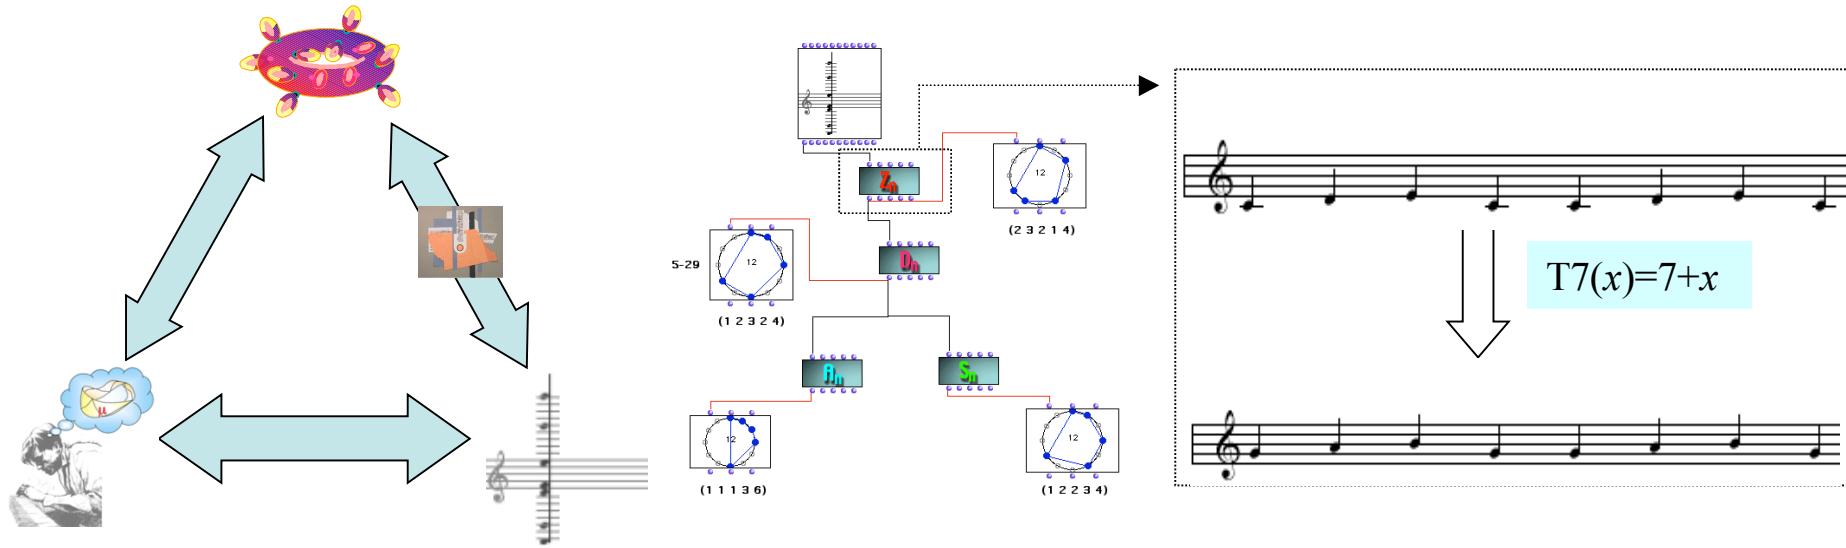

*Musique symbolique pour violoncelle seul, possède une architecture “hors-temps” fondée sur la théorie des groupes de transformations.*

# Matematica/Musica & Cognizione/Percezione

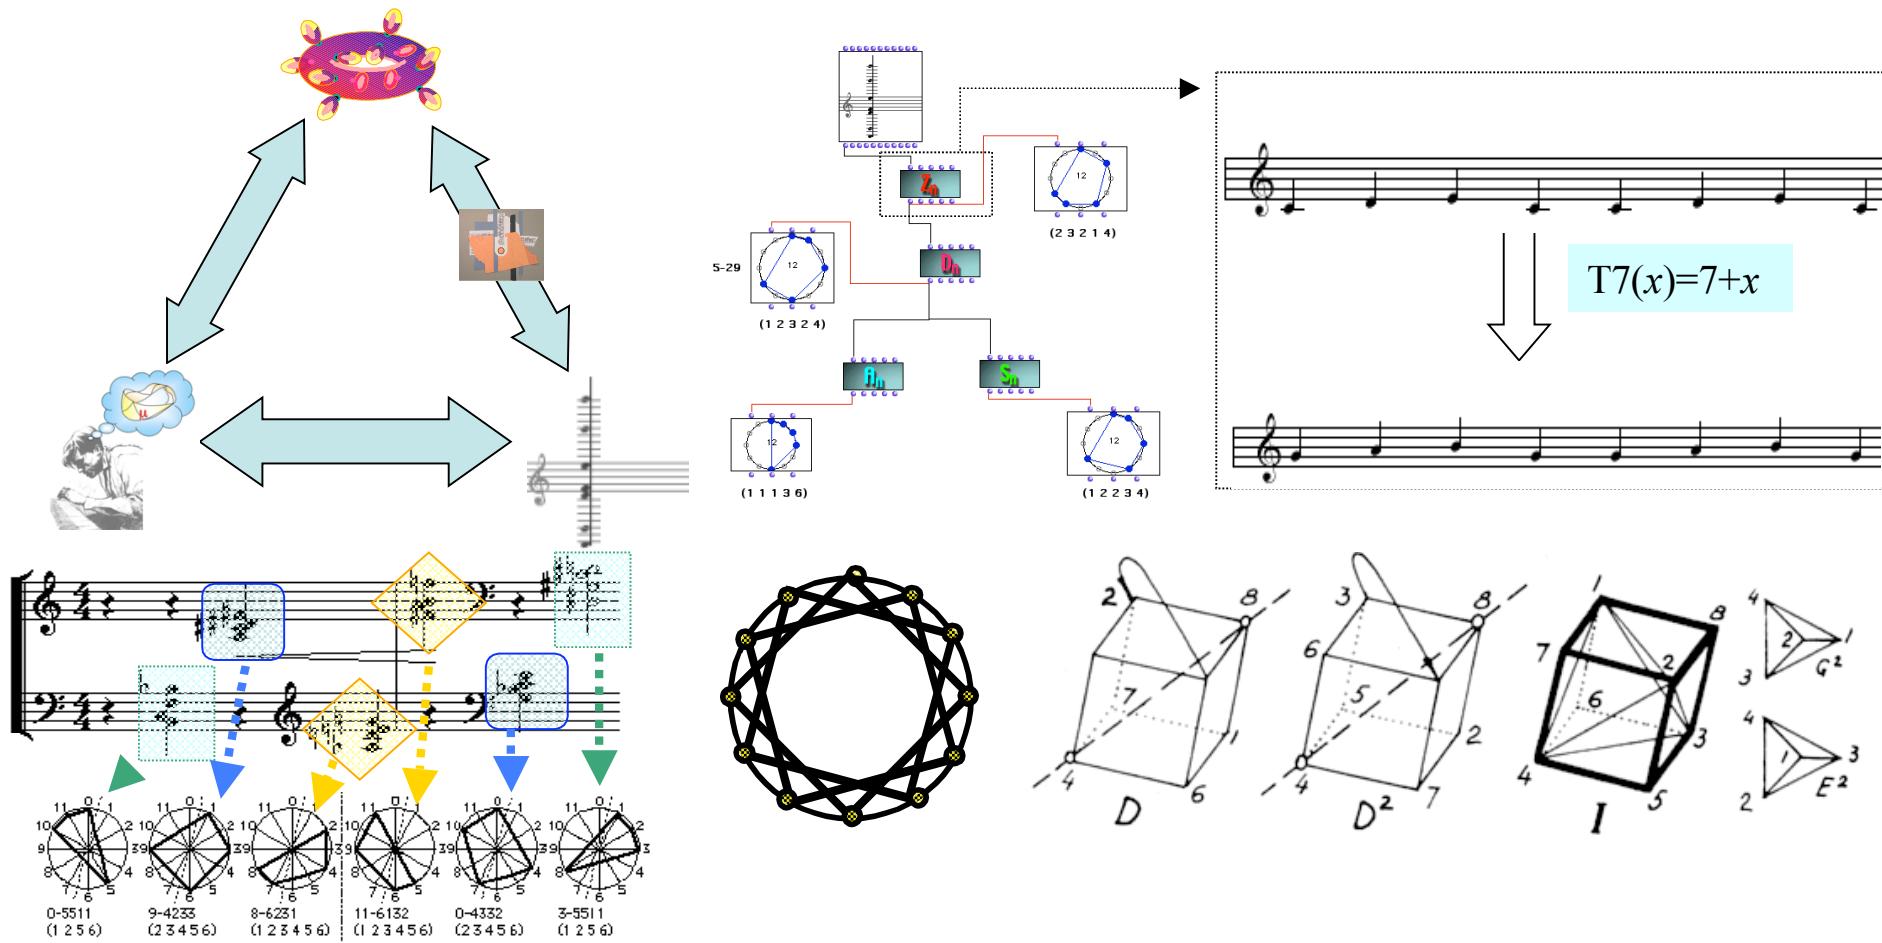

# Ramificazioni percettive e cognitive dei metodi algebrici in musica

The nature of a given geometry is [...] defined by the *reference* to a determinate **group** and the way in which spatial forms are related within that type of geometry. [Cf. Felix Klein Erlangen Program - 1872][...] We may raise the question whether there are any concepts and principles that are, although in different ways and different degrees of distinctness, necessary conditions for both the *constitution* of the **perceptual world** and the construction of the universe of geometrical thought. It seems to me that the concept of **group** and the concept of **invariance** are such principles.

E. Cassirer, “The concept of group and the theory of perception”, 1944

# Ramificazioni percettive e cognitive dei metodi algebrici in musica

*Il carattere singolare dell'esperienza musicale è dovuto in parte alle strutture particolari di **gruppo** che la musica rende accessibile [consciamente o inconsciamente] all'ascoltatore.*

G. Balzano : « The group-theoretic description of 12-fold and microtonal pitch systems », 1980
